CUSTOM FOOTER TERMS AND CONDITIONS PRIVACY POLICY

Introduction

Firstly we would like to thank you for buying our Screen theme, developed for Wordpress 3.0.

Screen is suitable for many different Businesses and Organizations because of its great features and the admin-panel with outstanding usability. Whether you have a Corporate Business or you are a Photographer, Screen has all the features you need to make your website into a unique concept.

Brainstorm session

Our idea was to develop a theme with unlimited possibilities. From a slider for your photos to a color picker that can change your website in all possible Company colors. Along the way Screen gained even more features than we discussed at our first brainstorm session. Some features we invented during development.

We wish you lots of fun working with Screen. If you need any support, visit www.theme-dutch.com.

Installation advice

In this section you'll find important information for support and how to work with Screen. After reading the following accurately, you'll have no problems with installing the theme.

Requirements:

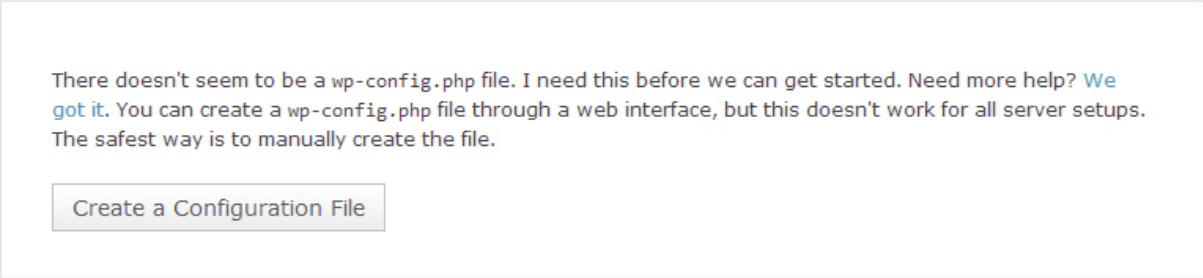

- Server with PHP 5 support
- MySQL database

Step 1 | Installing Wordpress

Install the latest version of Wordpress 3.0 on your server. You can download the ZIP-file for free from <http://wordpress.org/download/>. After unzipping the files you'll see a Wordpress-folder. Upload the complete folder to your server with your favorite FTP client. Pay attention and place the files at the root of your website. This location will be the URL of your website.

(<http://www.mycompany.com>)

Go to your URL with your browser and you'll probably see this report:

There doesn't seem to be a wp-config.php file. I need this before we can get started. Need more help? [We got it](#). You can create a wp-config.php file through a web interface, but this doesn't work for all server setups. The safest way is to manually create the file.

Create a Configuration File

Step 2 | Adjust File

During this process of installing you'll have to provide the config-file with your own data. Search for the file wp-config-sample.php and open it with your favorite editor. You have to change the information in to your database like following:

```
define('DB_NAME', 'mywebsite');
```

```
define('DB_USER', 'usermywebsite');
```

```
define('DB_PASSWORD', 'mywebsite1234');
```

```
define('DB_HOST', 'localhost');
```

Pay attention! Save the wp-config-sample.php file as wp-config.php and upload the file to your server.

Go back to your browser > <http://www.mywebsite.com> and you'll see the following screen if you filled in all data correctly.

Welcome

Welcome to the famous five minute WordPress installation process! You may want to browse the [ReadMe documentation](#) at your leisure. Otherwise, just fill in the information below and you'll be on your way to using the most extendable and powerful personal publishing platform in the world.

Information needed

Please provide the following information. Don't worry, you can always change these settings later.

Blog Title

Your E-mail

Double-check your email address before continuing.

Allow my blog to appear in search engines like Google and Technorati.

Install WordPress

Fill in the name of your website and e-mail address and click on Install Wordpress.

Note: you can change the Blog Title at any time after installation.

You'll see the following screen and also the last of the Wordpress installing process. Admin always is standard. You can change Admin later on as well as your password. As soon as you log on to Wordpress, you'll get a warning that advises you to change your password.

Success!

WordPress has been installed. Were you expecting more steps? Sorry to disappoint.

Username admin

Password B@V8GSuhs9

Note that password carefully! It is a *random* password that was generated just for you.

Log In

If you want to log on after this step, go to `/wp-login.php` (e.g. <http://www.mywebsite.com/wp-login.php>).

Enter your username and password here.

Step 3 | Installation Screen theme's most important features

You've installed the Wordpress CMS and now you'll have to install the theme. Upload the theme to:

wp-content/themes

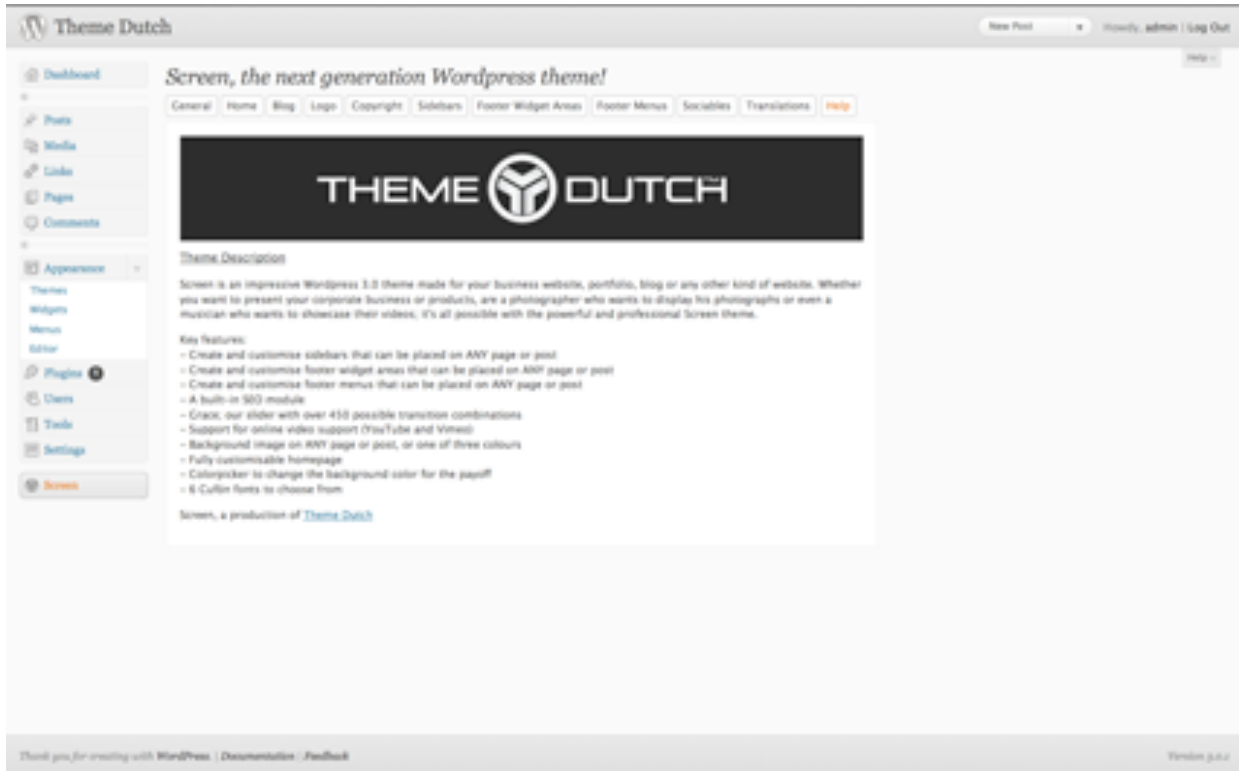

Go to Appearance and select Themes. You'll see Screen if you installed the theme correctly. Press activate to use the theme on your website. Go to your website and you'll see that Screen is installed and you are ready to adjust the content and design of your website any way you want.

Note: Press Activate to use Screen on your website.

Step 4 | Build your website fast and easy

After you followed the previous steps you can start building your new website. Screen is developed with usability in mind and that's the reason why you'll find tabs at the Screen panel to adjust every aspect of your website.

Screen page options

On every page or post you'll find the Screen option panel as you can see here. Here you can adjust every major part of your website like; payoff, background, page layout, sidebar, footer sidebar and which footer menu should be visible.

With these features directly on this page you have total freedom in designing each page separately and providing it with the right content, links etc.

SEO built-in Module

Optimisation of your website was never as easy as with Screen's built-in SEO module. With this module you can give basic page tags without the need of an extra plug-in. A character indicator also ensures that your page titles and descriptions always look good in search engines.

Grace the slider with 450+ transitions

You'll also find a feature to provide a slider on every page separately. On every page you can display pictures that perfectly match the page content.

The 'Grace options' dialog box is shown with the 'Grace this page:' dropdown set to 'slides'. The 'Slides options' section includes fields for 'Slide width' (960 px), 'Slide height' (250 px), 'Time between slides' (5000 ms), 'Show slides' (as thumbnails), and 'Show time indicator' (yes). A 'Select slide to edit:' dropdown is set to 'Slide #1', and an 'Add new slide' button is present. The 'Slide #1' section contains a 'Remove this slide' button, a 'Transition type' dropdown (Move vertical), an 'Image' field with a placeholder URL, 'Number of slices' (max. 50), 'Delay between slices' (ms), and 'Transition time' (ms). A note states: 'For a smooth animation, make sure the transition time exceeds the number of slices times the delay per slice. (e.g. 20 slices x 50 ms delay = a minimum of 1000 ms transition time.)'. Other options include 'Transition easing' (linear), 'Invert y-axis' (no), 'Transition direction' (From left), 'Fade in slices' (yes), 'Overlay title' (optional), 'Overlay text' (optional) with a 250 character limit, and 'Overlay link' (optional).

Video support

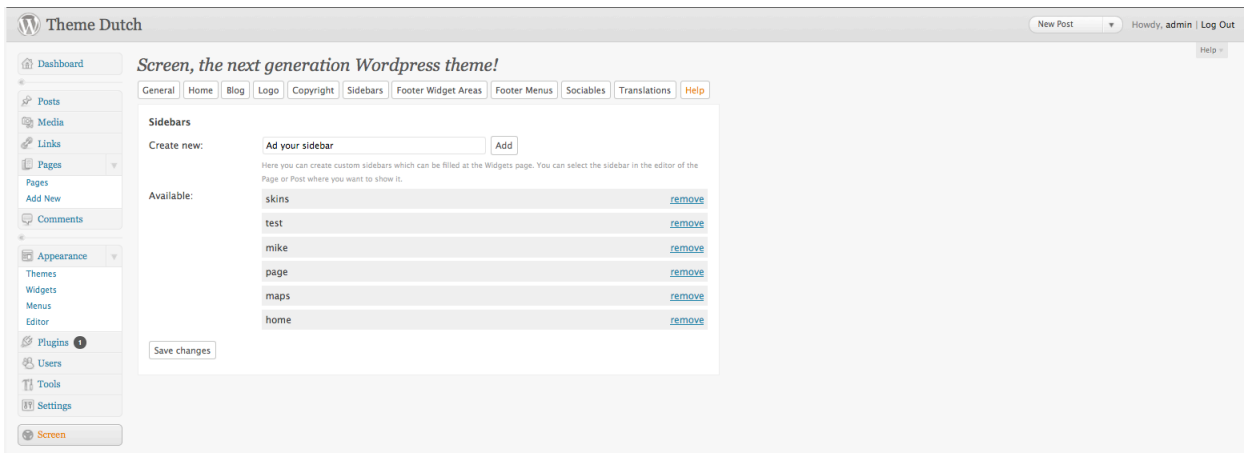

If you want to use your favorite videos instead of pictures, Screen also supports YouTube as well as Vimeo.

The 'Grace options' dialog box is shown with the 'Grace this page:' dropdown set to 'video'. The 'Video options' section includes fields for 'Video width' (960 px), 'Video height' (px), 'Vimeo' (www.vimeo.com/), 'YouTube' (www.youtube.com/watch?v=), and 'Autoplay' (no).

Create a sidebar

Screen's feature to provide every page with a custom sidebar gives you full control over every aspect of your website.

Give the sidebar you make an appropriate name and go to Appearance > Widgets. You'll see the sidebar you just made. Fill it with the widgets you want in the sidebar. Then go to the page where you want them to appear and select the option.

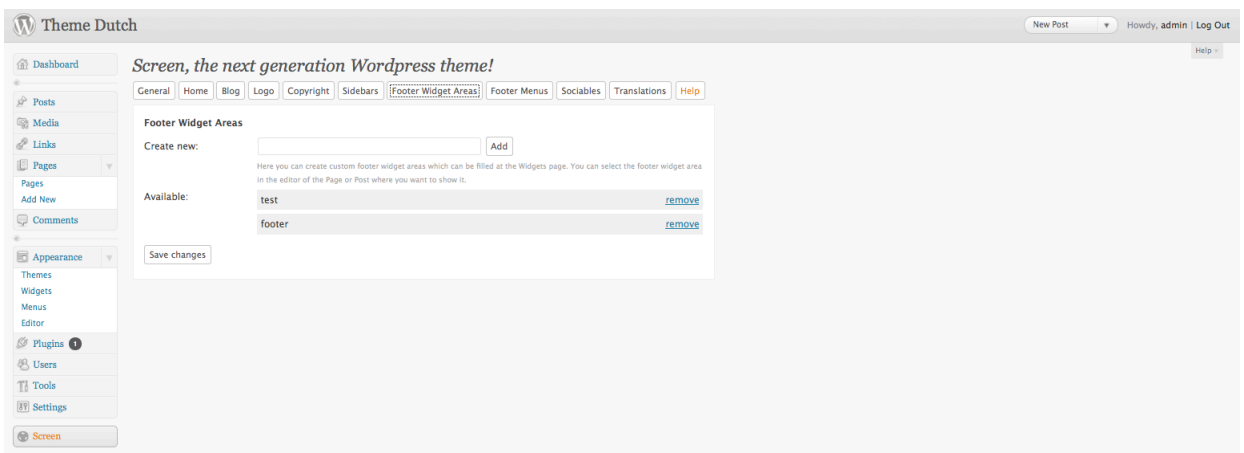

Sidebars Screen option panel.

Create a Footer sidebar

Here you can also make sidebars, which are visible at the bottom of a page or post. So the footer widgets can be different on every page as well.

Create a Footer sidebar and go to Appearance > Widgets. Here you can fill the footer sidebar you just made with widgets.

Create a Blog

Creating one or several blogs, is now easier then ever. Simply follow the next steps to create a blog on your website.

Create a category for your blog and give it a suitable name.

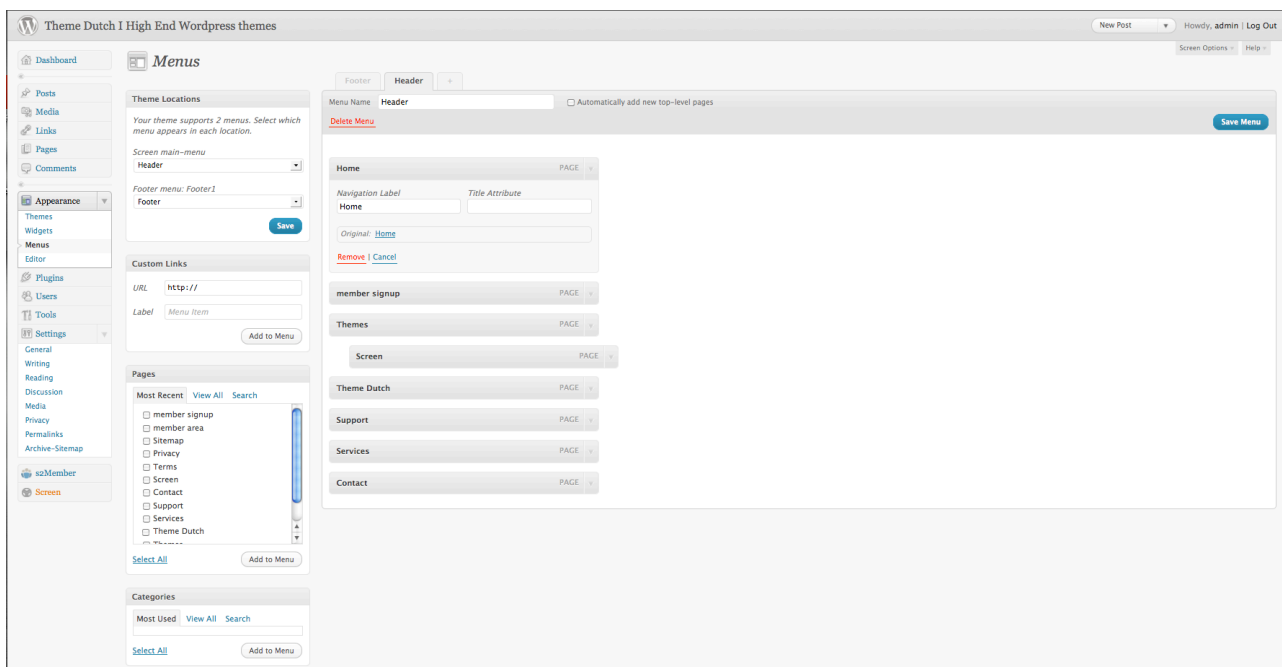

Place posts in the category you just have made.

Go to the Screen option panel and press on the tab-button. Here you'll find several features to adjust the blog, as you like. [Page layout, the number of posts on a page, background and the option to select a custom footer menu]. This is ideal if you want to place links to other blog categories in the footer menu.

Now go to Appearance > Menus. Add your Blog Category and place it in the menu as desired.

Create Menu Subtitles

Screen has the possibility to create menu subtitles . Go to Appearance > Menus. Open a Menu button and place the subtitle in the Title Attribute field. After you press save and refresh the page in your browser, your subtitle will be visible.

Support

If you need any support, have suggestions or you just want to ask a question. Go to www.theme-dutch.com/support

Guidelines for support

To make use of our free support you have to send an e-mail through www.themeforest.net and request a free membership. Mention your e-mail address and which theme you bought. As soon as we receive your request, we will prepare a free support-membership account that you can use after you received our log in information in your mailbox.

Note: Use the same e-mail address that you have used for registration at Themeforest. Only then we can verify which theme you've bought and if you have the right to free support.

As soon as you log in to our membership section, you can see which support you can get. You will find everything you need in your special support environment; from manuals to video manuals. You can also post a message on our blog if our information is inadequate and you have a request for our support team.

Our support team's goal is to handle every request quickly and correctly. During office hours we will try to answer immediately, but always within 24 hours on Monday to Friday.

Services

Our team of web designers and web developers is always standby if you want to make adjustments at your website. For a complete overview of our services and friendly prices: visit www.theme-dutch.com.
